

1. Food Market

The intervention aims to preserve the convivial and gathering character of the Mediterranean markets. We offer a continuous plateau covered and completely open to the adjacent public spaces. A roof with a permanent character and identity built with the know-how of local architecture, protects the central space from rain, sun (and overheating) and wind. Its geometry gives the market a unique spatiality and a great supply of natural light.

2. Gastronomic Center

The gastronomic center is a space where culture and production meet. The elements already present on the site, the old fish market building and a majestic pine tree, constitute the memory and identity of the place. Our approach aims to highlight and connect the existing in order to offer a narrative on the origin of the products and a meeting place between tourists and locals.

3. Cultural Platform

The project enhances and accentuates the quality of the site's existing topography. Surrounded by two party walls and two stone walls, one of which was built at the end of the 18th century, the existing void presents a rather exceptional typology. This bathtub effect provides protection from wind, sun and vehicles driving nearby (sound and vision). We actively maintain this void by occupying it as a performative park.
